

## **Comments from the June 2003 Training of Trainers**

*“The most beneficial things in the training were the concrete “real” modeling of the process and that the prime objective of the entire week was improving student learning and not just how to use technology”*

*“I used to think that using technology with my students would mean more work for me and my students. Now I see it as work done differently and is actually more efficient use of my instructional time”*

*“I have really benefited from learning how to balance the integration of technology in lessons, when to integrate technology and how to make that decision...also how innovative uses of technology can motivate students and increase student achievement”*

*“I now have a concrete game plan for getting all my teachers trained so they understand the “true meaning” of technology integration in a practical way that improves student achievement”*

*“This training has been particularly beneficial in filling the gaps of knowledge about curriculum and lesson planning that I lacked as a technology director”*

*“I now have a vision for true technology integration that is possible and attainable”*

*“It is all coming together now...the whole group, small group, and individual uses of technology as a tool for learning...I am excited to bring this back to my colleagues”*

*“ I feel that the training this week has provided me with the skills to make me a better trainer”*
